

Geometry CC – Mr. Valentino

Name: \_\_\_\_\_

Unit 7 Lesson 2: 45-45-90 Triangles

Date: \_\_\_\_\_ Per: \_\_\_\_\_

We will now look at...45-45-90 Triangles!

But first...a DO NOW!

We will now look at a **different** Special Right Triangle that can be extremely useful in many instances! We will construct this triangle with a square:

What is the measure of the diagonal?

$$a^2 + b^2 = c^2$$

$$1^2 + 1^2 = x^2$$

$$1 + 1 = x^2$$

$$\sqrt{2} = \sqrt{x^2}$$

$$\sqrt{2} = x$$

Time for some examples:

Now you try solving for the missing values:
