

MODELING WITH SYSTEMS OF INEQUALITIES
HOMEWORK

1. Jody is working two jobs, one as a carpenter and one as a website designer. He can work at most 50 hours per week and makes \$35 per hour as a carpenter and \$75 an hour as a website designer. He wants to make at least \$2350 per week but also wants to work at least 10 hours per week as a carpenter. Let c represent the hours he works as a carpenter and let w represent the hours he works as a website designer.

(a) Write a system of inequalities that models this scenario.

w = Website hours
 c = Carpenter hours

$c + w \leq 50$ (at most)
 $c \geq 10$
 $35c + 75w \geq 2350$ (At least)

(b) The graph of the system is shown below with its solutions shown shaded. Three lines are graphed. Label each with its equation.

$35c + 75w \geq 2350$
 $-35c$
 \hline
 $75w \geq 2350 - 35c$

(c) Find the coordinates of point A by solving a system of equations by Elimination.

$75w \geq 2350 - 35c$
 $\frac{75w}{75} \geq \frac{2350 - 35c}{75}$
 $w \geq 31.\bar{3} - \frac{7c}{15}$

```

NORMAL FLOAT AUTO REAL RADIAN MP
rref([A])
[ 1  0  35 ]
[ 0  1  15 ]
    
```

$c = 35$
 $w = 15$

$c \geq 10$

35 Solve the following system of inequalities graphically on the grid below and label the solution S.

$$3x + 4y > 20$$

$$\begin{array}{r} -3x \\ \hline 4y > -3x + 20 \end{array}$$

$$3x + 4y > 20$$

$$x < 3y - 18$$

$$x < 3y - 18$$

$$\frac{4y}{4} > \frac{-3x + 20}{4}$$

$$y > -\frac{3}{4}x + 5$$

Is the point (3,7) in the solution set? Explain your answer.
